

For the Spa and Wellness Center based on EuropeanLuxuryDaySpa, the following will be captured in the database:

- Customers
 - Customer ID
 - Full Name
 - Contact Information (Phone, Email)
 - Date of Birth
 - Membership Status
- Employees
 - Employee ID
 - Full Name
 - Role (Aesthetician, Massage Therapist)
 - Specializations
 - Contact Information
- Services
 - Service ID
 - Service Name (Swedish Massage, Deep Tissue Massage, European Facial, Microneedling, Eyebrow Waxing)
 - Description
 - Duration
 - Price
- Appointments

- Appointment ID
 - Customer ID (Foreign Key)
 - Employee ID (Foreign Key)
 - Service ID (Foreign Key)
 - Date and Time
 - Room Number
- Payments
 - Payment ID
 - Appointment ID (Foreign Key)
 - Payment Method
 - Amount
 - Payment Due
- Rooms
 - Room Number
 - Room Type (Massage Room, Facial Room, Waxing Room)
 - Availability Status
- Products
 - Product ID
 - Name
 - Description
 - Price
 - Quantity in Stock

Document Process:

To determine what to include in my project, I visited European Luxury Day Spa in White Plains, and spoke with one of the managers. She gave me a quick overview of how the business operates on a daily basis. She explained the importance of organizing customer appointments, managing employee schedules, tracking the different services, and making sure payments and products are recorded properly.

I realized that the spa depends on having an organized system that connects customers to services, appointments to employees, and payments to transactions. Based on what she shared, I decided to include the following key elements in my database: Customers, Employees, Services, Appointments, Payments, Products, and Rooms. Each of these plays a major role in how the spa operates.

She also gave me a pamphlet with the list of services to understand how they describe each treatment. With her input and my observation, I was able to design a database structure that shows what a business like this would actually need.
